

Turkshop

Graduate seminar, McGill

February 5, 2015

mitcho + Hadas

Today..

- Empirical methods in linguistic research.
 - Using Amazon's mechanical Turk
 - Designing a simple Turk experiment
- The basics: how to use Turk.
 - The *Create* tab: creating a new project
 - The *Manage* tab: paying workers, retrieving a results file
- Requesters and workers, background on Turk users.
- **Goal**: understand the benefits, challenges, and basic process of uploading an experiment to Turk.

The paper and tools

- We describe the use of *turktools*:
- <http://turktools.net>
- There's a paper there too.

Getting started

- Why/when AMT?
- Using experimental methods in linguistics
- Using Amazon's Mechanical Turk to in language studies.
 - Previous studies done in the ESSL.
 - Acceptability ratings
 - Sentence completion
 - Verification,
 - Sentence picture matching

Why/when AMT?

Q: Why is it better to gather data from hundreds potentially very noisy informants in a potentially very noisy environment than from a handful of trusted and cooperative informants in your office?

- A1: Representativeness across speakers – but why?
 - Observer biases
 - Informants are Non-representative sample
- A2: Representativeness across items
- Noise
 - The experimental task involves engaging noisy cognitive systems (memory, etc.)
 - The phenomenon of interest itself is noisy

Single informant vs. AMT crowd

- What makes a traditional, single informant data gathering session successful?
- Good informant
 - Cooperative
 - Teachable
 - Constructive feedback, insights
- Good items
 - Appropriate context
 - Representative items
- Suitable task
 - Training
- Conducive environment

Getting started

- Design considerations
- An example experiment
- Structure of files
- Uploading experiment to Turk

Simple Designs: 2×1

- In case we are simply interested in the presence or absence of one property of a sentence on its grammaticality.
- Effect of animacy on grammaticality of English ‘make’-causative.

- (1) a. The coach made the ball bounce on the floor.
b. The coach made the gymnast bounce on the floor.

Simple Designs: 2×1

- Presence or absence of Complex NP island:
 - (2) a. What did you claim that John bought?
 - b. *What did you make the claim that John bought?

2×2 Designs

- example1 (based on Kotek & Erlewine, ms, “Blocking effects in English causatives”).
 - Effect of animacy of the causee in two kinds of causative constructions: Animacy × Type.
 - Animate vs. inanimate
 - Lexical causative vs. ‘make’ causative (*v* vs. *make-v*)
- (3) a. That’s the ball that the coach *bounced* on the floor.
b. That’s the gymnast that the coach *bounced* on the floor.
c. That’s the ball that the coach *made bounce* on the floor.
d. That’s the gymnast that the coach *made bounce* on the floor.

2×2 Designs and Latin Square

- (3) a. That's the ball that the coach *bounced* on the floor.
b. That's the gymnast that the coach *bounced* on the floor.
c. That's the ball that the coach *made bounce* on the floor.
d. That's the gymnast that the coach *made bounce* on the floor.
- We want each participant to only rate *one* of these conditions for a given item.
 - **Latin square design:** cycles through our items to create lists.
 - List 1: (1a), (2b), (3c), (4d), (5a), ...
 - List 2: (1b), (2c), (3d), (4a), (5b), ...
 - ... (for 4 conditions, we need a multiple of 4 lists)

A	B	C
C	A	B
B	C	A

2×2 Designs

- Designs more complicated than 2×2 are not recommended because they are hard to analyze and interpret.
- To check for an effect, we create multiple items that manipulate the factors of interest.
 - The example file today has only 5.

Fillers

- Normally, at least as many as the targets
- Distract from the true purpose of the experiment
- Even out skewness in items
- Serve as an exclusion criterion
 - Overall accuracy
 - “catch items”

The structure of an items file

experiment item-number condition

Fillers all have the same condition name

Item #1 in blocking experiment, has four conditions.

Item #2 repeats same four conditions.

```
1 # filler 1 filler
2 That's the girl that the teacher played with the doll.
3
4 # filler 2 filler
5 That's the student that the councilor made skip the road.
6
7 # blocking 1 inanimate-make-v
8 That's the book that the girl made balance on her head.
9
10 # blocking 1 inanimate-v
11 That's the book that the girl balanced on her head.
12
13 # blocking 1 animate-make-v
14 That's the gymnast that the coach made balance on the beam.
15
16 # blocking 1 animate-v
17 That's the gymnast that the coach balanced on the beam.
18
19 # blocking 2 inanimate-make-v
20 That's the ladder that the worker made lean against the door.
21
22 # blocking 2 inanimate-v
23 That's the ladder that the worker leaned against the wall.
24
25 # blocking 2 animate-make-v
26 That's the gang that the officer made lean against the wall.
27
28 # blocking 2 animate-v
29 That's the gang that the officer leaned against the wall.
```

Amazon's Mechanical Turk

- www.mturk.com
- Sign in as requester

Make Money by working on HITs

HITs - Human Intelligence Tasks - are individual tasks that you work on. [Find HITs now.](#)

As a Mechanical Turk Worker you:

- Can work from home
- Choose your own work hours
- Get paid for doing good work

or [learn more about being a Worker](#)

Get Results from Mechanical Turk Workers

Ask workers to complete HITs - Human Intelligence Tasks - and get results using Mechanical Turk. [Register Now](#)

As a Mechanical Turk Requester you:

- Have access to a global, on-demand, 24 x 7 workforce
- Get thousands of HITs completed in minutes
- Pay only when you're satisfied with the results

The home screen

- Two main tabs we will discuss: *Create* and *Manage*.

The screenshot shows the Amazon Mechanical Turk requester interface. At the top, there's a navigation bar with links to 'go to MTurk.com', 'Hack! Lab | Account Settings | Sign Out | Help', and the 'amazonmechanical turk' logo with 'REQUESTER' next to it. Below this is a main navigation bar with tabs: 'Home' (selected), 'Create', 'Manage', 'Developer', and 'Help'. Under the 'Home' tab, there are links for 'Overview', 'Tour', 'Case Studies', and 'Business Solutions', along with a link 'We're Hiring! Learn More'. The main content area features a large orange heading 'Work Distribution Made Easy'. Below this, a subheading states 'Mechanical Turk gives businesses and developers access to an on-demand, scalable workforce'. Three bullet points with green checkmarks list benefits: 'Flexibility: Scale your workforce up and down quickly', 'Accuracy: Get high-quality, cost-effective results', and 'Speed: Start receiving results in minutes'. An orange 'Get Started' button is positioned below these points. To the right of the text is an icon of three stylized human figures in blue and orange. At the bottom, there are three smaller sections: 'Work Distribution Made Easy' (repeating the main heading and text), 'Categorization on Mechanical Turk' (describing the 'Categorization App' and showing a folder icon), and 'Sentiment Rating Simplified' (describing the 'Sentiment App' and showing smiley and frowny face icons).

The *Create* tab

- Each experiment that is set up requires two steps:
 - Set up a template for your experiment:
 - Name and description
 - Worker (=participant) qualifications
 - Payment
 - Number of workers
 - HTML template to present items, including instructions and practice items.
 - Upload a item lists file and publish a “batch.”

New Project New Batch with an Existing Project Create HITs individually

Edit Project

Specify the properties that are common for all of the HITs created using this project.

1 Enter Properties 2 Design Layout 3 Preview and Finish

Project Name: Turkshop blocking example This name is not displayed to Workers.

Describe your HIT to Workers

Title
Describe the task to Workers. Be as specific as possible, e.g. "answer a survey about movies", instead of "short survey", so Workers know what to expect.

Description
Give more detail about this task. This gives Workers a bit more information before they decide to view your HIT.

Keywords
Provide keywords that will help Workers search for your HITs.

☐ This project may contain potentially explicit or offensive content, for example, nudity. [\(See details\)](#)

Creating a new project: Specifications

- We normally pay \$.10-.15 for a short survey, \$.2-.3 for longer surveys.
- Calculate how many observations per item you would like to have.
 - We've created 8 lists (4 lists and their reverse) → 8 HITs
 - Each condition in each item appears in 2 lists
 - 3 assignments per HIT → 6 observations per condition/item
 - We have 5 items in our experiment → 30 observations per condition (across items)

Setting up your HIT

Reward per assignment
Tip: Consider how long it will take a Worker to complete each task. A 30 second task that pays \$0.05 is a \$6.00 hourly wage.

Number of assignments per HIT
How many unique Workers do you want to work on each HIT?

Time allotted per assignment
Maximum time a Worker has to work on a single task. Be generous so that Workers are not rushed.

HIT expires in
Maximum time your HIT will be available to Workers on Mechanical Turk.

Results are automatically approved in
After this time, all unreviewed work is approved and Workers are paid.

[Advanced »](#)

Creating a new project: Specifications

<h3>Instructions</h3>
<p>This questionnaire presents 10 English sentences. Your task is to decide whether each sentence sounds natural or not. You might not be uttering the
sentences yourself, but you might nevertheless have an intuition as to how natural they are. Please indicate whether the sentence sounds natural or not
by selecting one of the buttons below the sentence. Here is an example:</p>
<hr />
<table>
  <tbody>
    <tr>
      <td style="width:600px" colspan="2">That's the play that the producer turned into a film.</td>
    </tr>
    <tr height="30">
      <td width="50%" align="center" style="">NATURAL</td>
      <td width="50%" align="center" style="">UNNATURAL</td>
    </tr>
    <tr>
      <td align="center" style=""><input type="radio" value="Y" name="RatingSample1" /></td>
      <td align="center" style=""><input type="radio" value="N" name="RatingSample1" /></td>
    </tr>
  </tbody>
</table>
<hr />
<p>In the above example, it is very clear that the sentence is natural, so please select the button on the left, labeled "Natural."</p>
<p>Here is another example:</p>
<hr />
<table>
  <tbody>
    <tr>
      <td style="width:600px" colspan="2">That's the door that the carpenter opened a hole</td>
```

Survey Code: BLR

PLEASE COMPLETE AT MOST ONE BLR SURVEY. YOU WILL NOT BE PAID FOR COMPLETING MORE THAN ONE SURVEY WITH THIS CODE.

Instructions

This questionnaire presents 10 English sentences. Your task is to decide whether each sentence sounds natural or not. You might not be uttering the sentences yourself, but you might nevertheless have an intuition as to how natural they are. Please indicate whether the sentence sounds natural or not by selecting one of the buttons below the sentence. Here is an example:

That's the play that the producer turned into a film.

NATURAL

UNNATURAL

In the above example, it is very clear that the sentence is natural, so please select the button on the left, labeled "Natural."

Here is another example:

Creating a new project: Finish

- Re-read your instructions.
 - Make sure your examples are clear for someone who is not reading the text carefully (i.e., most users).
 - Verify consent statement is there.
- Put an email address that you use for communication purposes.
- Check the consent statement.
- Check that there are many items as the text says there are (and you think there are).
- Verify that the counter at the bottom of the page works properly.

Creating a new project: Finish

The *Manage* tab

- We reject subjects who did not comply with instructions.
 - Completed more than one survey, if we asked for just one (often a requirement for language studies!).
 - Did not complete experiment.
- Possibly also:
 - Failed on ‘catch’ items.
 - Exhibit guessing behavior.
- But **NOT**: Non-native speakers!
 - That may bias participants into saying they are native speakers when in fact they are not.

What it looks like from the workers' end

Approving/rejecting workers

- Reject subjects who did not comply with instructions.
 - Completed more than one survey
(often a requirement for language studies!).
 - Did not complete survey.
- Possibly also:
 - Failed on ‘catch’ items.
 - Exhibit guessing behavior.
- But **NOT**: Non-native speakers!
 - May bias participants into saying they are native speakers.

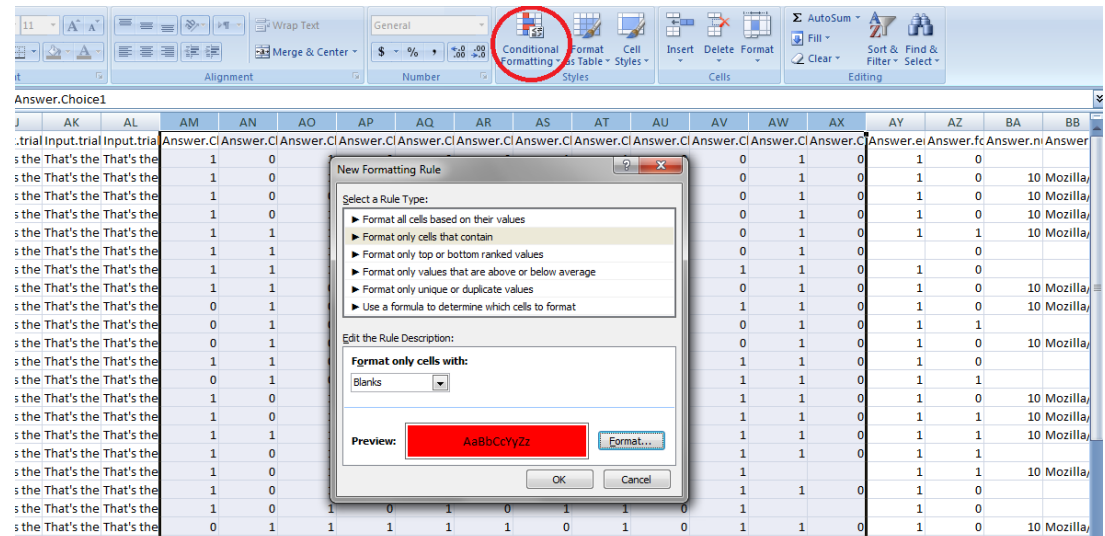

Approving/rejecting workers

- Open your .csv results file in Excel.

- Custom sort by WorkerId
- Find duplicates

- Conditional formatting: highlight unanswered questions; decide if anyone missed too many.

What we wanted to test: blocking example

- Effect of crossing **animacy** of causee and **verb type** on acceptability of causative sentences.

blocking 1 inanimate-v

That's the **ball** that the coach **bounced** on the floor.

blocking 1 animate-v

That's the **gymnast** that the coach **bounced** on the floor.

blocking 1 inanimate-make-v

That's the **ball** that the coach **made bounce** on the floor.

blocking 1 animate-make-v

That's the **gymnast** that the coach **made bounce** on the floor.

What it looks like from the workers' end

In order to get paid, please make sure that you answer all 14 items.

Consent Statement: By answering the following questions, you are participating in a study being performed by linguists in the Department of Linguistics and Philosophy at Massachusetts Institute of Technology. If you have questions about this research, please contact [EMAIL](#). Your participation in this research is voluntary. You may decline to answer any or all of the following questions. You may decline further participation at any time without adverse consequences. Your anonymity is assured; the researchers who have requested your participation will not receive any personal information about you.

1. That's the sentence that the linguist added without thinking.

NATURAL

☐

UNNATURAL

☐

-
2. That's the idea that the team floated at the meeting.

NATURAL

☐

UNNATURAL

☐

-
3. That's the rabbit that the magician made vanish into thin air.

NATURAL

☐

UNNATURAL

☐

-
4. That's the intern that the supervisor returned for another shift.

NATURAL

☐

UNNATURAL

☐

Our Turk survey

- Forced choice: natural = 1, unnatural = 0
- 10 items
 - 5 targets
 - Four conditions each
 - 5 fillers
 - Two clearly unnatural, three clearly natural
- 8 lists
- 56 total participants

Understanding and decoding our results

- Open the .csv results file in Excel.
 - What information does it give us?
- Decode using decoder.py!
- **DEMO?**
- Now open the decoded file in Excel.
 - What information does it give us?

Fields in the decoded results

- WorkerId: Amazon ID for the worker
- AssignmentId: unique to that submission
- AssignmentStatus: Submitted, Approved, Rejected
- WorkTimeInSeconds
- ListNumber, PresentationOrder
- Section, Item, Condition
 - These came from the decode file
- field_N: your actual stimuli
- In our template skeletons:
 - Choice: forced choice value
 - Extras: english, foreignlang, numanswered, useragent

More on AMT

- Demographics
 - Locations, languages
 - Naïveté, Worker Training, Satisficing
 - Accuracy/Reliability for Linguistic tasks
-
- <https://sites.google.com/site/amazonturkshop/link>
 - <http://experimentalturk.wordpress.com/2012/10/09/slides-from-acr-2012/>

Demographics, Economics, Ethics, etc.

- **More than 500,000 registered workers**

- 46% US
- 34% India (50% as of May 2010)
- 19.20% Other (64 countries)

<http://techlist.com/mturk/global-mturk-worker-map.php>

<http://www.behind-the-enemy-lines.com/2010/03/new-demographics-of-mechanical-turk.html>

- **More than 700,000 HITs per week**

- Conjectured to be actually about 5,950,000 HITs per week
- 80% of HITs are performed by 20% most active workers (est. to be between 3,011 and 8,582 workers)
- They spend more than 15 hours a week on AMT

Unless stated differently the information is from Fort et. al (2011): Amazon Mechanical Turk: Gold Mine or Coal Mine? *Computational Linguistics* 37,2. 413-420.

Where is the AMT Workforce?

50,000 MTurk workers who have performed techlist HITs. All data copyright © 2011 techlist.com. (<http://techlist.com/mturk/global-mturk-worker-map.php>)

Demographics, Economics, Ethics, etc.

- Workers earn less than US\$ 2.- per hour (below minimum wage)
 - For 20% of workers their AMT earnings represent primary source of income,
 - For 50% it is their secondary income
 - Unregulated workplace (no collective bargaining)
 - No channels of redress of employer wrongdoing (e.g. no payment)
- There are alternative crowd-sourced work environments
 - They train their workforce
 - They pay minimum wage
- Implications of labor costs for research/funding expectation etc.
- The NPR Planet Money podcast recently (January 2015) did a story interviewing Turk workers: <http://www.npr.org/blogs/money/2015/01/30/382657657/episode-600-the-people-inside-your-machine>

Naïveté, Cheating, Satisficing, Task Complexity, etc.

- **Naïveté:** It is often said that gathering data from naïve participants is important to ensure getting unbiased data (e.g. Gibson et al. 2010, etc.)
- How naïve are the AMT workers?
 - Between 3,011 and 8,582 workers do 80% of the HITs
 - Repeat participants
 - Cross-talk
- When/what type of naïveté is desirable?
- Informant training
 - Metalinguistic tasks
 - Co-reference, Variable Binding

A worker on an AMT forum

It makes me wonder if some of the folks posting surveys are somehow unaware that turkers take hundreds of surveys. If they're unaware, they don't know what they're doing.

If they *are* aware, why do I see so many surveys cutting-and-pasting questions like, as an example, these:

A bat and a ball cost \$1.10 in total. The bat costs \$1.00 more than the ball. How much does the ball cost?

If it takes 5 machines 5 minutes to make 5 widgets, how long would it take 100 machines to make 100 widgets?

In a lake, there is a patch of lily pads. Every day, the patch doubles in size. If it takes 48 days for the patch to cover the entire lake, how long would it take for the patch to cover half of the lake?

These questions can only work to measure what they're supposed to measure the very first time a survey-taker sees them. After that, the cat's out of the bag. Why would a serious researcher put that sort of content into a survey that goes to a pool of professional survey takers? It's a tainted pool. Do they not notice that MTurkers get those questions right way more than the general population? Again, I suspect many of these researchers simply don't care. They're either students, or they're just ripping off whomever gave them the money for the research.

Not really funny but a good heads-up. A new thing I have seen in a couple of surveys today is special instructions about only copying part of the "code" at the end. For example, the last one I did said this:

On the next page, you will see a complete code which will consist of three letters, two numbers, and then the letter "x" followed by three additional numbers. In order to receive credit on Mechanical Turk, copy only the three letters and two numbers that precede the "x". If you copy the three numbers that follow the "x", we will assume that you did not follow our directions and you will not be paid.

*First they came for the Communists, and I didn't speak up, because I wasn't a Communist.
Then they came for the Jews, and I didn't speak up, because I wasn't a Jew.
Then they came for the Catholics, and I didn't speak up, because I was a Protestant.
Then they came for me, and by that time there was no one left to speak up for me.*

Naïveté, Satisficing, Task Complexity Ceiling, etc.

- Satisficing
 - Satisficers perform tasks strategically so as to minimize effort without running the risk of being caught cheating
 - Advice: Do your own survey before posting!
- How high(low) is the task complexity ceiling?
 - Word sense disambiguation:
 - Snow et al. (2008): Words had, on average, 3 senses. AMT workers are as good as trained annotators;
 - Bardwaj et al. (2010): Words had, on average, 9.5 sense AMT workers are worse than trained annotators.
 - How long can successful experiments be?
 - Ipeirotis (2010): submitting large jobs in MTurk results in low quality and unpredictable completion time

Validation of AMT for Linguistic Tasks

- Sprouse (2011)
 - Compared 176 laboratory participants with 176 AMT workers
 - 24 sentence types (in 16 lexicalizations; Latin Square)
 - Magnitude Estimation Task Judging acceptability of

Standard: Who said my brother was kept tabs on by the FBI? 100 Item:
What did Lisa meet the man that bought? _____

- Analyzed: Whether-Islands, CNP-islands, Subject Islands, Adjunct Island, Center Embedding Illusion, Comparative Illusion, Agreement Attraction Illusion
- Sprouse (2011) finds comparable data across the two populations (no meaningful difference in participant rejection, statistical power (except for comparative illusion?), shape of distribution)

Validation of AMT for Linguistic Tasks (cont.)

- Munro et al. (2010)
 - Compared data from 7 different linguistic tasks to published data and find no loss of quality in AMT generated data
 - Semantic Transparency rating (cool down – cool, give up – give)
 - Segmentation of auditory speech (artificial language learning) into words
 - CLOZE tasks
 - Acceptability of ‘that’ omission in complement clauses and relative clauses
 - Corpus frequency of Agent embedding interpretations
 - (1) The investigation of the police took 3 weeks to complete
 - (2) It took 3 weeks to complete the investigation of the police
 - Metaphorical frequency

Things to consider when using AMT

- What is the theoretical question you are trying to address?
- Why is it important to get data from many speakers?
- What is the task?
- Do your theories make different predictions when you consider possible confounds coming from the task?
 - Spell – out predictions quantitatively
- Do your informants need to be trained on the task?
 - Practice Items
 - Task description
- What are possible satisficing strategies?
 - Filler Items
 - Catch items
- Ethical considerations
